

Enhanced Compile Mode

Control/DCD Release 2.4 enhances the standard IBM Compiler Listing by adding a new set of COBOL diagnostics that can dramatically increase a programmer's productivity.

Control/DCD incorporates the Enhanced Compile Mode (ECM) which modifies the standard IBM COBOL compiler's diagnostics regardless of compiler version. The source code listing comes with enhanced diagnostics embedded in the listing.

This ECM listing is a more cost effective output for documenting and modifying a COBOL program. Additionally, the ECM is a very cost effective tool for migration to the new Enterprise Compilers. The ECM extends the life of the COBOL V4.2 compiler.

Control/DCD provides:

- Hierarchical notation on program flow, data field narratives,
- Perform errors, unused code, unused 01 records and copy-books,
- Invalid Data detection. Call parameter errors. Occurs clause errors. Perform errors, and much more.
- Enhanced Abend warnings.

Control/DCD is executed via JCL so that the standard compile job is modified one-time.

Contact Marble Computer today for a free no obligation evaluation of Control/DCD.

Fact Sheet

Control/DCD

Did you know.....

Marble Computer has been in business since 1983.

Our primary product Control/DCD helps major corporations manage their mission critical applications 24x7.

Control/DCD helps our customers migrate to IBM compilers 6.2 or 6.3.

Control/DCD provides output in .pdf format.

Marble Computer software products are z/15 compliant, support z/OS V2.5 and all COBOL Version including 6.2 & 6.3.
